第150回学部・研究科セミナー&第51回生物多様生研究センターセミナー

○ 日時:平成30年12月7日(金) 午後4時半~5時半

○ 場所:名古屋市立大学 山の畑キャンパス 4号館3階大講義

○ 講師: Mr. Sahat Ratmuangkhwang

(カセサート大学・アンダマン沿岸研究開発ステーション・タイ)

題目: Conservation of Mangrove Forest in Ranong, southern Thailand

The Ranong mangrove ecosystem on the Andaman Sea coastline of southern Thailand mainly consists of primary forest and some secondary vegetation. Until recently, mangrove forests have been mainly recognized by local people for their direct use values. This misconception coupled with the consideration of mangrove resources as being "open access" easily leads to their exploitation. The national and local government unit regulations and enforcement are crucial to ensure the protection of mangroves. In addition, the success of the mangrove forest rehabilitation and conservation depends on the participation of local people. Thus, the local people need to be better informed about the mangrove resources and ecosystem and ecological and economic benefits.

山の畑キャンパスへの道順:http://www.nsc.nagoya-cu.ac.jp/location.html

学内外の教員・学生・市民の皆様の御参加を広く歓迎致します(参加は無料)。 英語での講演ですが、ゆっくり平易に話してもらうつもりです。
